

Jaswanth Samba | jashsamba@gmail.com | +1 (647)-769-5588

Education & Certifications:

University of Waterloo, ON, Canada

Aug 2018 – Oct 2019

Master's in management sciences (MMSC), Data Analytics and Project Management

Relevant Courses: Operation Analytics, Quantitative Data Analytics, Statistical Methods for Data Analytics and Machine Learning, Statistical Consulting and Big Data.

BMS Institute of Technology, VTU, India

Jul 2013 – Aug 2017

Bachelor's in engineering (BE), Electronics and Communication Engineering.

Programming Skills	Python, SQL, SAP, DAX, Advanced MS Excel, M Queries/Power Queries, Spark, JavaScript, KQL, FastAPI, Next.js
Databases & Cloud	Azure Cloud, Supabase, Firebase, Vector Databases, Microsoft Fabric (Data Lakes, Data Warehouse, Event House, real-time streaming datasets), Firebase Hosting, Docker, API & GraphQL
ETL & Data Integration	API Configuration with Python, real-time data pipelines/Event Stream Pipelines, Medallion architecture, SSIS, Fabric Data pipelines, Apache Airflow automation, OpenAI API integration
AI	Anaconda Python, OpenAI Stack, Claude , Nvidia NIM Stack, AI scheduling systems, AGI-based automation, Agentic AI-assisted developer
Certifications	Cognitive Project Management in Artificial Intelligence from Project Management Institute (PMI) – May 2025

Experience:

Business Data Engineer (AI Engineer)

Musashi Auto Parts – Waterloo, Canada

Aug 2022 – Present

- **Global Experience / Leadership** - Led international AI and Data Engineering training sessions during a business trip to Japan; empowered developers to localize and teach core concepts in their native languages, showcasing global leadership and scalable tech enablement.
- **Trainer** – Trained a team of 26. Trained and managed my colleagues with Data Engineering and Data Science in Microsoft Fabric around 10 countries – America, Canada, Japan, Indonesia, China, Vietnam, India, Germany, Brazil & Mexico.
- **Fabric Data Engineer** – Worked on data transformation in **Fabric** to elevate on-premises SSIS ETL flow & SQL Servers into cloud.
- **IOT Data Analyst** - Developed real-time IoT data integration solutions using Python and REST APIs to ingest and analyse global device telemetry across multiple regions. Integrated this with Microsoft Fabric pipelines for live dashboards supporting manufacturing operations.
- Led data analytics initiatives in automotive manufacturing, building scalable ETL systems, predictive models, and real-time dashboards across 10+ countries
- **ETL Processes** - Implemented **Change Data Capture (CDC)** and Incremental Load strategies, optimizing data flow based on table conditions, improving overall efficiency and reliability.
- **Power BI Dashboards** – Created over 15 Dashboards for **Chief Management** for 10 countries. Fully automated. **CXO** Dashboards. CFO Dashboards and CEO Report
- **SME** – Worked with the Microsoft official team and understood the architecture of Fabric and I am the subject matter expert on **Notebooks**, Data Pipelines, Dataflow, ETL, Dashboards and Real-time Dashboards for my company across the globe for Musashi Auto Parts.
- **SAP** - Learnt the logic from ABAP data model and transferred them into SQL Stored Procedure and SQL Views for better processing and flow of the data.
- **Architecture Implementation & REST APIs** – Developed Data Lakehouse, Warehouse, real-time pipelines and end to end processes by transporting data from SAP ERP tool into Microsoft Fabric. Python code using **REST, POST & GET API** that would extract all the currency exchange rate & IoT Devices across the globe.
- **Domain – Manufacturing (Auto-Parts) – ETLs, AI Automation, EDA, Descriptive Analytics, Operational Reporting**
- **Tools – Spark, Real-Time pipelines, SSIS, SQL, Python, Fabric, Power BI, Power Query, Dax, Foundry**

Business Intelligence Analyst – Property Insights

Tesco, India

Jun 2021 – Jul 2022

- **Tableau Transition** - Re-constructed the report library which consisted of 15 reports into Tableau. This resulted in saving ample amount of time taken to complete the report on Tableau compared to Excel.
- **Cost Predictive Project** - Collaborated with UK Engineering Management, Finance and Verisae team and executed **ACM (Asset Condition model)** using SQL and Advance Excel. This predictive cost analytical model was able to predict the capital for the next 3 years of a budget of 17M pounds.
- **Project Management** - Lead and coordinated between 7+ teams to create a **Tableau** dashboard that tracks the daily/periodic activities of Capex and Opex of the main process teams in the UK for over 3000+ stores. This descriptive-analytical model helped the UK Head of Property of Tesco to have a High-Level view of his departments which involves tracking around 60 KPIs and over 15+ teams. It was a dashboard created to represent a split of 1.5B pounds.
- **Technical Project** - Supported the team on creating SPs (Procedures), Views and Data flow by using **SQL**, simplified the complexity of the data by normalizing the database and making it easier for the team to extract data.
- **Domain – Retail (Property Maintenance) – Descriptive, EDA, Inferential, Diagnostic and Predictive Analysis**
- **Tools – SSIS, SQL, Tableau, Power Automate, Advance Excel, Beginner level – VBA, Python, Power Query**

Business Intelligence Analyst

Compass Group – Crothall, Canada

Jan 2020 – May 2020

- **Project Management** - Innovated a Unitizing Analysis using **Power BI** for 15 hospitals east of Canada which would track the number of employees based on area in square ft.
- **Technical Project** - Saved over 36 Full Time Employees resources and provided efficient way to schedule the employees on ground using **Power BI and DAX**.
- **Project Management** - Worked with Third Party Wanda Virtual Manager Large Datasets around 150,000+ data points and conducted ETL techniques to keep a clean data of metrics.
- **Project Management** - Analysed data sets from vendors to monitor vending machines, hospital employees, quality of the hospitals, blood transport and other variables on the ground for over 40+ hospitals.
- **Technical Project** - Implemented **Power BI** dashboards and visuals with variables to provide detailed analysis which did reduce execution time by 50% and saved resources utilized. Interacted with 40+ hospitals to collect data, analyse and build insightful reports for their weekly usage.
- **Project Management** - Provided Call Centre Analysis to audit the number of calls, durations of calls, overtime calls and helped the centre to set up time shifts to accept calls with appropriate amount of staffing which was also Cost-effective by 20%
- **Domain – Healthcare Analytics – Descriptive, EDA, Inferential, Diagnostic and Predictive Analysis**
- **Tools – Power BI, DAX, SQL, Python**
